

BPS 7th Grade Math Planning Guide

1	2	3	4	5	6	7	8	9	10	11	12	13
-------------------	-------------------	-------------------	-------------------	-------------------	-------------------	-------------------	-------------------	-------------------	--------------------	--------------------	--------------------	--------------------

Mathematical Practice Standards: Vehicle for All Content

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning

UNIT 1: THE NUMBER SYSTEM

GO MATH! MODULE 1: ADDING & SUBTRACTING INTEGERS

7.NS.1, 7.NS.3, 7.EE.3

Lesson 1.1: Adding Integers with the Same Sign **7.NS.1, 7.NS.1b, 7.NS.1d**

Lesson 1.2: Adding Integers with Different Signs **7.NS.1, 7.NS.1b**

Lesson 1.3: Subtracting Integers **7.NS.1, 7.NS.1c**

Lesson 1.4: Applying Addition and Subtraction of Integers **7.NS.1, 7.NS.1d, 7.NS.3, 7.EE.3**

Montana Seventh Grade Standards for Mathematics

7.NS.1: Apply and extend previous understandings of addition and subtraction to add and subtract rational numbers; represent addition and subtraction on a horizontal or vertical number line diagram.

7.NS.1b: Understand $p + q$ as the number located a distance of $|q|$ from p , in the positive or negative direction depending on whether q is positive or negative. Show that a number and its opposite have a sum of 0 (are additive inverses). Interpret sums of rational numbers by describing real-world contexts.

Continued on next page

7th Grade BPS Suggested Planning Guide

7.NS.1c: Understand subtraction of rational numbers as adding the additive inverse, $p - q = p + (-q)$. Show that the distance between two rational numbers on the number line is the absolute value of their difference, and apply this principle in real-world contexts.

7.NS.1d: Apply properties of operations as strategies to add and subtract rational numbers.

7.NS.3: Solve real-world and mathematical problems from a variety of cultural contexts, including those of Montana American Indians, involving the four operations with rational numbers. NOTE: Computations with rational numbers extend the rules for manipulating fractions to complex fractions.

7.EE.3: Solve multi-step real-life and mathematical problems posed with positive and negative rational numbers in any form (whole numbers, fractions, and decimals), using tools strategically. Apply properties of operations to calculate with numbers in any form; convert between forms as appropriate; and assess the reasonableness of answers using mental computation and estimation strategies. *For example: If a woman making \$25 an hour gets a 10% raise, she will make an additional 1/10 of her salary an hour, or \$2.50, for a new salary of \$27.50. If you want to place a towel bar 9 3/4 inches long in the center of a door that is 27 1/2 inches wide, you will need to place the bar about 9 inches from each edge; this estimate can be used as a check on the exact computation.*

GO MATH! MODULE 2: MULTIPLYING & DIVIDING INTEGERS

7.NS.2, 7.NS.3, 7.EE.3

Lesson 2.1: Multiplying Integers **7.NS.2, 7.NS.2a**

Lesson 2.2: Dividing Integers **7.NS.2, 7.NS.2b, 7.NS.3**

Lesson 2.3: Applying Integer Operations **7.NS.2a, 7.NS.2c, 7.NS.3, 7.EE.3**

Montana Seventh Grade Standards for Mathematics

7.NS.2: Apply and extend previous understandings of multiplication and division and of fractions to multiply and divide rational numbers.

7.NS.2a: Understand that multiplication is extended from fractions to rational numbers by requiring that operations continue to satisfy the properties of operations, particularly the distributive property, leading to products such as $(-1)(-1) = 1$ and the rules for multiplying signed numbers. Interpret products of rational numbers by describing real-world contexts.

7.NS.2b: Understand that integers can be divided, provided that the divisor is not zero, and every quotient of integers (with non-zero divisor) is a rational number. If p and q are integers, then $-(p/q) = (-p)/q = p/(-q)$. Interpret quotients of rational numbers by describing real-world contexts.

7.NS.2c: Apply properties of operations as strategies to multiply and divide rational numbers.

7.NS.3: Solve real-world and mathematical problems from a variety of cultural contexts, including those of Montana American Indians, involving the four operations with rational numbers. NOTE: Computations with rational numbers extend the rules for manipulating fractions to complex fractions.

7.EE.3: Solve multi-step real-life and mathematical problems posed with positive and negative rational numbers in any form (whole numbers, fractions, and decimals), using tools strategically. Apply properties of operations to calculate with numbers in any form; convert between forms as appropriate; and assess the reasonableness of answers using mental computation and estimation strategies. *For example: If a woman making \$25 an hour gets a 10% raise, she will make an additional 1/10 of her salary an hour, or \$2.50, for a new salary of \$27.50. If you want to place a towel bar 9 3/4 inches long in the center of a door that is 27 1/2 inches wide, you will need to place the bar about 9 inches from each edge; this estimate can be used as a check on the exact computation.*

GO MATH! MODULE 3: RATIONAL NUMBERS

7.NS.1, 7.NS.2, 7.NS.3, 7.EE.3

Lesson 3.1: Rational Numbers & Decimals **7.NS.2b, 7.NS.2d**

Lesson 3.2: Adding Rational Numbers **7.NS.1a, 7.NS.1b, 7.NS.1d, 7.NS.3**

Lesson 3.3: Subtracting Rational Numbers **7.NS.1, 7.NS.1c**

Lesson 3.4: Multiplying Rational Numbers **7.NS.2, 7.NS.2a, 7.NS.2c**

Lesson 3.5: Dividing Rational Numbers **7.NS.2, 7.NS.2b, 7.NS.2c**

Lesson 3.6: Applying Rational Number Operations **7.NS.3, 7.EE.3**

Montana Seventh Grade Standards for Mathematics

7.NS.1: Apply and extend previous understandings of addition and subtraction to add and subtract rational numbers; represent addition and subtraction on a horizontal or vertical number line diagram.

7.NS.1a: Describe situations in which opposite quantities combine to make 0. *For example, a hydrogen atom has 0 charge because its two constituents are oppositely charged.*

7.NS.1b: Understand $p + q$ as the number located a distance of $|q|$ from p , in the positive or negative direction depending on whether q is positive or negative. Show that a number and its opposite have a sum of 0 (are additive inverses). Interpret sums of rational numbers by describing real-world contexts.

7.NS.1c: Understand subtraction of rational numbers as adding the additive inverse, $p - q = p + (-q)$. Show that the distance between two rational numbers on the number line is the absolute value of their difference, and apply this principle in real-world contexts.

7.NS.1d: Apply properties of operations as strategies to add and subtract rational numbers.

7.NS.2: Apply and extend previous understandings of multiplication and division and of fractions to multiply and divide rational numbers.

7.NS.2a: Understand that multiplication is extended from fractions to rational numbers by requiring that operations continue to satisfy the properties of operations, particularly the distributive property, leading to products such as $(-1)(-1) = 1$ and the rules for multiplying signed numbers. Interpret products of rational numbers by describing real-world contexts.

7.NS.2b: Understand the integers can be divided, provided that the divisor is not zero, and every quotient of integers (with non-zero divisor) is a rational number. If p and q are integers, then $-(p/q) = (-p)/q = p/(-q)$. Interpret quotients of rational numbers by describing real-world contexts.

7.NS.2c: Apply properties of operations as strategies to multiply and divide rational numbers.

7.NS.2d: Convert a rational number to a decimal using long division; know that the decimal form of a rational number terminates in 0s or eventually repeats.

7.NS.3: Solve real-world and mathematical problems from a variety of cultural contexts, including those of Montana American Indians, involving the four operations with rational numbers. NOTE: Computations with rational numbers extend the rules for manipulating fractions to complex fractions.

7.EE.3: Solve multi-step real-life and mathematical problems posed with positive and negative rational numbers in any form (whole numbers, fractions, and decimals), using tools strategically. Apply properties of operations to calculate with numbers in any form; convert between forms as appropriate; and assess the reasonableness of answers using mental computation and estimation strategies. *For example: If a woman making \$25 an hour gets a 10% raise, she will make an additional $\frac{1}{10}$ of her salary an hour, or \$2.50, for a new salary of \$27.50. If you want to place a towel bar $9\frac{3}{4}$ inches long in the center of a door that is $27\frac{1}{2}$ inches wide, you will need to place the bar about 9 inches from each edge; this estimate can be used as a check on the exact computation.*

UNIT 2: RATIOS & PROPORTIONAL RELATIONSHIPS

GO MATH! MODULE 4: RATES & PROPORTIONALITY

7.RP.1, 7.RP.2

Lesson 4.1: Rates **7.RP.1**

Lesson 4.2: Constant Rates of Change **7.RP.2, 7.RP.2a, 7.RP.2b, 7.RP.2c**

Lesson 4.3: Proportional Relationships & Graphs **7.RP.2a, 7.RP.2b, 7.RP.2c, 7.RP.2d**

Montana Seventh Grade Standards for Mathematics

7.RP.1: Compute unit rates associated with ratios of fractions, including ratios of lengths, areas, and other quantities measured in like or different units. *For example, if a person walks $\frac{1}{2}$ mile in each $\frac{1}{4}$ hour, compute the unit rate as the complex fraction $(\frac{1}{2})(\frac{1}{4})$ miles per hour, equivalently 2 miles per hour.*

7.RP.2: Recognize and represent proportional relationships between quantities.

7.RP.2a: Describe whether two quantities are in a proportional relationship, e.g., by testing for equivalent ratios in a table or graphing on a coordinate plane and observing whether the graph is a straight line through the origin.

7.RP.2b: Identify the constant or proportionality (unit rate) in tables, graphs, equations, diagrams, and verbal descriptions of proportional relationships.

7.RP.2c: Represent proportional relationships by equations. *If total cost t is proportional to the number n of items purchased at a constant price p , the relationship between the total cost and the number of items can be expressed as $t = pn$.*

7.RP.2d: Explain what a point (x,y) on the graph of a proportional relationship means in terms of the situation, with special attention to the points $(0,0)$ and $(1,r)$ where r is the unit rate.

GO MATH! MODULE 5: PROPORTIONS & PERCENT

7.RP.3, 7.EE.2, 7.EE.3

Lesson 5.1: Percent Increase & Decrease **7.RP.3**

Lesson 5.2: Rewriting Percent Expressions **7.RP.3, 7.EE.2, 7.EE.3**

Lesson 5.3: Applications of Percent **7.RP.3, 7.EE.3**

Montana Seventh Grade Standards for Mathematics

7.RP.3: Use proportional relationships to solve multi-step ratio and percent problems. *Examples: simple interest, tax, markups and markdowns, gratuities and commissions, fees, percent increase and decrease, percent error.*

7.EE.2: Understand that rewriting an expression in different forms in a problem context can shed light on the problem and how the quantities in it are related. *For example, $a + 0.05a = 1.05a$ means that “increase by 5%” is the same as “multiply by 1.05.”*

7.EE.3: Solve multi-step real-life and mathematical problems posed with positive and negative rational numbers in any form (whole numbers, fractions, and decimals), using tools strategically. Apply properties of operations to calculate with numbers in any form; convert between forms as appropriate; and assess the reasonableness of answers using mental computation and estimation strategies. *For example: If a woman making \$25 an hour gets a 10% raise, she will make an additional $\frac{1}{10}$ of her salary an hour, or \$2.50, for a new salary of \$27.50. If you want to place a towel bar $9\frac{3}{4}$ inches long in the center of a door that is $27\frac{1}{2}$ inches wide, you will need to place the bar about 9 inches from each edge; this estimate can be used as a check on the exact computation.*

UNIT 3: EXPRESSIONS, EQUATIONS, & INEQUALITIES

GO MATH! MODULE 6: EXPRESSIONS & EQUATIONS

7.EE.1, 7.EE.2, 7.EE.4

Lesson 6.1: Algebraic Expressions [7.EE.1](#), [7.EE.2](#)

Lesson 6.2: One-Step Equations with Rational Coefficients [7.EE.4](#)

Lesson 6.3: Writing Two-Step Equations [7.EE.4](#)

Lesson 6.4: Solving Two-Step Equations [7.EE.4](#), [7.EE.4a](#)

Montana Seventh Grade Standards for Mathematics

7.EE.1: Apply properties of operations as strategies to add, subtract, factor, and expand linear expressions with rational coefficients.

7.EE.2: Understand that rewriting an expression in different forms in a problem context can shed light on the problem and how the quantities in it are related. *For example, $a + 0.05a = 1.05a$ means that “increase by 5%” is the same as “multiply by 1.05.”*

7.EE.4: Use variables to represent quantities in a real-world or mathematical problems, and construct simple equations and inequalities to solve problems by reasoning about the quantities.

7.EE.4a: Solve word problems leading to equations of the form $px + q = r$ and $p(x + q) = r$, where p , q , and r are specific rational numbers. Solve equations of these forms fluently. Compare an algebraic solution to an arithmetic solution, identifying the sequence of the operations used in each approach. *For example, the perimeter of a rectangle is 54 cm. Its length is 6 cm. What is its width?*

GO MATH! MODULE 7: INEQUALITIES

7.EE.4

Lesson 7.1: Writing & Solving One-Step Inequalities **7.EE.4b**

Lesson 7.2: Writing Two-Step Inequalities **7.EE.4**

Lesson 7.3: Solving Two-Step Inequalities **7.EE.4b**

Montana Seventh Grade Standards for Mathematics

7.EE.4: Use variables to represent quantities in a real-world or mathematical problems, and construct simple equations and inequalities to solve problems by reasoning about the quantities.

7.EE.4b: Solve word problems leading to inequalities of the form $px + q > r$ or $px + q < r$, where p , q , and r are specific rational numbers. Graph the solution set of the inequalities and interpret it in the context of the problem. *For example, as a salesperson, you are paid \$50 per week plus \$3 per sale. This week you want your pay to be at least \$100. Write an inequality for the number of sales you need to make, and describe the solutions.*

End of 2nd Quarter

UNIT 4: GEOMETRY

GO MATH! MODULE 8: MODELING GEOMETRIC FIGURES

7.G.1, 7.G.2, 7.G.3, 7.G.5

Lesson 8.1: Similar Shapes & Scale Drawings **7.G.1**

Lesson 8.2: Geometric Drawings **7.G.2**

Lesson 8.3: Cross Sections **7.G.3**

Lesson 8.4: Angle Relationships **7.G.5**

Montana Seventh Grade Standards for Mathematics

7.G.1: Solve problems involving scale drawings of geometric figures, including computing actual lengths and areas from a scale drawing and reproducing a scale drawing at a different scale.

7.G.2: Draw (freehand, with ruler and protractor, and with technology) geometric shapes with given conditions. Focus on constructing triangles from three measures of angles or sides, noticing when the conditions determine a unique triangle, more than one triangle, or no triangle.

7.G.3: Describe the two-dimensional figures that result from slicing three-dimensional figures, as in plane sections of right rectangular prisms and right rectangular pyramids.

7.G.5: Use facts about supplementary, complementary, vertical, and adjacent angles in a multi-step problem to write and solve simple equations for an unknown angle in a figure.

GO MATH! MODULE 9: CIRCUMFERENCE, AREA, & VOLUME

7.G.4, 7.G.6

- Lesson 9.1: Circumference 7.G.4
- Lesson 9.2: Area of Circles 7.G.4
- Lesson 9.3: Area of Composite Figures 7.G.6
- Lesson 9.4: Solving Surface Area Problems 7.G.6
- Lesson 9.5: Solving Volume Problems 7.G.6

Montana Seventh Grade Standards for Mathematics

7.G.4: Know the formulas for the area and circumference of a circle and use them to solve problems from a variety of cultural contexts, including those of Montana American Indians; give an informal derivation of the relationship between circumference and area of a circle.

7.G.6: Solve real-world and mathematical problems, including those of Montana American Indians involving area, volume and surface area of two- and three-dimensional objects composed of triangles, quadrilaterals, polygons, cubes, and right prisms.

UNIT 5: STATISTICS

GO MATH! MODULE 10: RANDOM SAMPLES & POPULATIONS

7.RP.2, 7.SP.1, 7.SP.2,

- Lesson 10.1: Populations & Samples 7.SP.1
- Lesson 10.2: Making Inferences from a Random Sample 7.RP.2c, 7.SP.1, 7.SP.2
- Lesson 10.3: Generating Random Samples 7.SP.2

Montana Seventh Grade Standards for Mathematics

7.RP.2: Recognize and represent proportional relationships between quantities.

7.RP.2c: Represent proportional relationships by equations. *For example, if total cost t is proportional to the number n of items purchased at a constant price p , the relationship between the total cost and the number of items can be expressed as $t = pn$.*

7.SP.1: Understand that statistics can be used to gain information about a population by examining a sample of the population; generalizations about a population from a sample are valid only if the sample is representative of that population. Understand that random sampling tends to produce representative samples and support valid inferences.

7.SP.2: Use data, including Montana American Indian demographics data, from a random sample to draw inferences about a population with an unknown characteristic of interest. Generate multiple samples (or simulated samples) of the same size to gauge the variation in estimates or predictions. *For example, estimate the mean word length in a book by randomly sampling words from the book; predict the winner of a school election based on randomly sampled survey data, predict how many text messages your classmates receive in a day. Gauge how far off the estimate or prediction might be.*

GO MATH! MODULE 11: ANALYZING & COMPARING DATA

7.SP.3, 7.SP.4

Lesson 11.1: Comparing Data Displayed in Dot Plots **7.SP.3, 7.SP.4**
Lesson 11.2: Comparing Data Displayed in Box Plots **7.SP.3, 7.SP.4**
Lesson 11.3: Using Statistical Measures to Compare Populations **7.SP.3, 7.SP.4**

Montana Seventh Grade Standards for Mathematics

7.SP.3: Informally assess the degree of visual overlap of two numerical data distributions with similar variabilities, measuring the difference between the centers by expressing it as a multiple of a measure of variability. *For example, the mean height of players on the basketball team is 10 cm greater than the mean height of players on the soccer team, about twice the variability (mean absolute deviation) on either team; on a dot plot, the separation between the distributions of heights is noticeable.*

7.SP.4: Use measures of center and measures of variability for numerical data from random samples to draw informal comparative inferences about two populations. *For example, decide whether the words in a chapter of a 7th grade science book are generally longer than the words in a chapter of a 4th grade science book.*

UNIT 6: PROBABILITY

GO MATH! MODULE 12: EXPERIMENTAL PROBABILITY

7.SP.5, 7.SP.6, 7.SP.7, 7.SP.8

Lesson 12.1: Probability **7.SP.5, 7.SP.7a**
Lesson 12.2: Experimental Probability of Simple Events **7.SP.6, 7.SP.7b**
Lesson 12.3: Experimental Probability of Compound Events **7.SP.8, 7.SP.8a, 7.SP.8b, 7.SP.8c**
Lesson 12.4: Making Predictions with Experimental Probability **7.SP.6**

Montana Seventh Grade Standards for Mathematics

7.SP.5: Understand that the probability of a chance event is a number between 0 and 1 that expresses the likelihood of the event occurring. Larger numbers indicate greater likelihood. A probability near 0 indicates an unlikely event, a probability around $\frac{1}{2}$ indicates an event that is neither unlikely nor likely, and a probability near 1 indicates a likely event.

7.SP.6: Approximate the probability of a chance event by collecting data on the chance process that produces it and observing its long-run relative frequency, and predict the approximate relative frequency given the probability. *For example, when rolling a number cube 600 times, predict that a 3 or 6 would be rolled roughly 200 times, but probably not exactly 200 times. For example, when playing Montana American Indian Hand/Stick games, you can predict the approximate number of accurate guesses.*

7.SP.7: Develop a probability model and use it to find probabilities of events. Compare probabilities from a model to observed frequencies; if the agreement is not good, explain possible sources of the discrepancy.

7.SP.7a: Develop a uniform probability model by assigning equal probability to all outcomes, and use the model to determine probabilities of events. *For example, if a student is selected at random from a class, find the probability that Jane will be selected and the probability that a girl will be selected.*

Continued on next page

7.SP.7b: Develop a probability model (which may not be uniform) by observing frequencies in data generated from a chance process. *For example, find the*

7th Grade BPS Suggested Planning Guide

approximate probability that a spinning penny will land heads up or that a tossed paper cup will land open-end down. Do the outcomes for the spinning penny appear to be equally likely based on the observed frequencies?

7.SP.8: Find probabilities of compound events using organized lists, tables, tree diagrams, and simulations.

7.SP.8a: Understand that, just as with simple events, the probability of a compound event is the fraction of outcomes in the sample space for which the compound event occurs.

7.SP.8b: Represent sample spaces for compound events using methods such as organized lists, tables and tree diagrams. For an event described in everyday language (e.g., “rolling double sixes”), identify the outcomes in the sample space which compose the event.

7.SP.8c: Design and use a simulation to generate frequencies for compound events. *For example, use random digits as a simulation tool to approximate the answer to the question: If 40% of donors have type A blood, what is the probability that it will take at least 4 donors to find one with type A blood?*

GO MATH! MODULE 13: THEORETICAL PROBABILITY & SIMULATIONS

7.SP.6, 7.SP.7, 7.SP.8

Lesson 13.1: Theoretical Probability of Simple Events **7.SP.7, 7.SP.7a**

Lesson 13.2: Theoretical Probability of Compound Events **7.SP.8, 7.SP.8a, 7.SP.8b**

Lesson 13.3: Making Predictions with Theoretical Probability **7.SP.6, 7.SP.7a**

Lesson 13.4: Using Technology to Conduct a Simulation **7.SP.8, 7.SP.8c**

Montana Seventh Grade Standards for Mathematics

7.SP.6: Approximate the probability of a chance event by collecting data on the chance process that produces it and observing its long-run relative frequency, and predict the approximate relative frequency given the probability. *For example, when rolling a number cube 600 times, predict that a 3 or 6 would be rolled roughly 200 times, but probably not exactly 200 times. For example, when playing Montana American Indian Hand/Stick games, you can predict the approximate number of accurate guesses.*

7.SP.7: Develop a probability model and use it to find probabilities of events. Compare probabilities from a model to observed frequencies; if the agreement is not good, explain possible sources of the discrepancy.

7.SP.7a: Develop a uniform probability model by assigning equal probability to all outcomes, and use the model to determine probabilities of events. *For example, if a student is selected at random from a class, find the probability that Jane will be selected and the probability that a girl will be selected.*

7.SP.8: Find probabilities of compound events using organized lists, tables, tree diagrams, and simulations.

7.SP.8a: Understand that, just as with simple events, the probability of a compound event is the fraction of outcomes in the sample space for which the compound event occurs.

Continued on next page

7.SP.8b: Represent sample spaces for compound events using methods such as organized lists, tables and tree diagrams. For an event described in

7th Grade BPS Suggested Planning Guide

everyday language (e.g., “rolling double sixes”), identify the outcomes in the sample space which compose the event.

7.SP.8c: Design and use a simulation to generate frequencies for compound events. *For example, use random digits as a simulation tool to approximate the answer to the question: If 40% of donors have type A blood, what is the probability that it will take at least 4 donors to find one with type A blood?*
